

Sravan Kumar Manikyamshetty

(508) 454-7789 | sravankumarmanikyamshetty@gmail.com | Worcester, MA

Senior DevOps / Site Reliability Engineer • AWS EKS • Kubernetes • GitOps • Datadog • CI/CD

PROFESSIONAL SUMMARY

Senior DevOps / Platform Engineer with 5+ years of production-grade experience managing Kubernetes (AWS EKS) clusters, designing GitOps pipelines (Argo CD, GitHub Actions, CircleCI), and implementing cloud-native infrastructure at scale. Deep expertise in AWS ecosystem (EKS, ECS, Lambda, Glue, VPC, Transit Gateway), Infrastructure as Code (Terraform, CloudFormation), and observability (Datadog, Prometheus, Grafana, CloudWatch). Strong networking fundamentals including NAT, TCP/IP, DNS, firewall rules, VPC design, and Kubernetes ingress/egress. Experienced in SRE practices, incident management, SLA/SLO tracking, and on-call operations in regulated healthcare and financial services environments.

CORE COMPETENCIES

Kubernetes & Orchestration: AWS EKS (production), Helm Charts, Nginx Ingress, Docker, OpenShift, AKS — cluster scaling, GitOps drift detection, pod networking

CI/CD & GitOps: GitHub Actions (reusable workflows), Argo CD, CircleCI, Jenkins — end-to-end pipeline design, SAST/DAST integration, multi-repo automation

Observability & Monitoring: Datadog (APM, dashboards, monitors, alerts, SLOs), Prometheus, Grafana, CloudWatch, ELK Stack — incident response and RCA

AWS Cloud: EKS, ECS, EC2, S3, Lambda, Glue, Step Functions, RDS, VPC, Transit Gateway, GWLB, CloudFront, Route53, IAM, WAF, Security Hub

Networking: NAT (SNAT/DNAT), TCP/IP, DNS, BGP, firewalls, VPCs, subnets, security groups, NACLs, Kubernetes ingress/egress, F5, Palo Alto, AWS Cloud WAN

Infrastructure as Code: Terraform (modules, EKS, VPC, IAM), CloudFormation, ARM, Bicep, Ansible — secure, compliant, scalable environments

Security & Compliance: HIPAA, SAST/DAST pipelines, PAM (just-in-time access), AWS WAF, Security Hub, RBAC, IAM least-privilege

Scripting & Automation: Python (boto3, LLM APIs for log summarization), Bash/Shell — cloud task automation, CI/CD integration, incident tooling

Databases & Messaging: Oracle, MySQL, PostgreSQL, MongoDB, RDS, Athena, Snowflake, BigQuery

PROFESSIONAL EXPERIENCE

Senior Site Reliability Engineer | MetLife

July 2023 – Present

- Managed and scaled production AWS EKS clusters supporting HIPAA-compliant healthcare microservices — handling cluster upgrades, node group scaling, pod scheduling, and Kubernetes networking (Nginx ingress, service mesh routing).
- Designed and implemented GitOps deployment workflows using Argo CD for automated application delivery, configuration drift detection, and rollback across multiple EKS clusters.
- Built reusable GitHub Actions workflows standardizing CI/CD across 15+ microservices repositories — integrating Docker builds, ECR pushes, SAST/DAST security scans, and EKS deployments in a single pipeline.
- Implemented observability and production monitoring using Prometheus, Grafana, and CloudWatch — built dashboards, alert rules, and SLO tracking; integrated LLM APIs to auto-summarize Jenkins and Kubernetes logs for faster RCA.
- Authored Terraform modules and CloudFormation templates to provision EKS clusters, VPCs, subnets, IAM roles, and RDS instances — enabling repeatable, auditable infrastructure deployments.
- Designed advanced networking architecture including AWS Transit Gateway (TGW) for hub-spoke VPC connectivity, Gateway Load Balancer (GWLB) integrated with Palo Alto firewalls for east-west traffic inspection, and F5 load balancers for SSL termination and hybrid cloud connectivity.
- Configured AWS Security Hub and WAF for compliance monitoring; deployed Privileged Access Management (PAM) with just-in-time access controls and session recording.

- Deployed and maintained ELK Stack (Elasticsearch, Logstash, Kibana) for centralized log analytics across distributed services.
- Developed Python automation scripts using boto3 to manage EC2, EKS, S3, IAM snapshots, and CloudWatch operations — reducing manual cloud tasks by 60%.
- Established SRE practices: SLA/SLO definition, incident management process with JIRA, runbooks, and on-call rotation; led AWS Center of Excellence (COE) to standardize cloud governance and cost optimization.
- Implemented AWS batch pipelines using Lambda, S3, Athena, Step Functions, and RDS for data processing and task orchestration across clustered services.

DevOps Engineer | Tata Consultancy Services (TCS)

May 2021 – March 2023

- Coordinated DevOps practices across 7 development teams and multiple simultaneous software releases — established branching strategies, release pipelines, and deployment runbooks.
- Designed and deployed Azure infrastructure (IaaS/PaaS) including VMs, VNets, NSGs, Application Gateways, and AKS for production workloads; implemented Azure RBAC and Active Directory integration.
- Built and maintained CI/CD pipelines using Jenkins and Python scripts — automated build, test, and deployment orchestration via Jenkins REST APIs; used Maven and Gradle for Java artifact builds.
- Created CloudFormation templates to auto-provision VPC, Subnets, EC2, S3, IAM, EBS, Auto Scaling Groups, and RDS — reducing environment setup time from days to hours.
- Managed container lifecycle: built custom Docker images, optimized base images, maintained ECR and JFrog Artifactory/Nexus repositories for Maven artifacts and Docker images.
- Implemented fault-tolerant, highly available AWS architectures with Auto Scaling, Elastic Load Balancing, and Multi-AZ RDS deployments.
- Collaborated with development and QA teams using JIRA and Confluence to maintain sprint velocity and technical documentation.

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, ECS, EC2, S3, Lambda, Glue, VPC, RDS, CloudFront, Route53, IAM, WAF), Azure (VMs, AKS, VNet, AD)

Kubernetes & Containers: AWS EKS, AKS, OpenShift, Docker, Helm Charts, Nginx Ingress Controller, pod networking, service mesh

CI/CD & GitOps: GitHub Actions, Argo CD, CircleCI, Jenkins, Flux — GitOps, drift detection, multi-repo pipelines

Observability: Datadog (APM, logs, dashboards, SLOs), Prometheus, Grafana, CloudWatch, ELK Stack

IaC & Config Mgmt: Terraform, CloudFormation, ARM, Bicep, Ansible

Networking: TCP/IP, DNS, BGP, NAT, firewalls, VPC, subnets, SGs, NACLs, TGW, GWLB, F5, Palo Alto, AWS Cloud WAN

Scripting: Python (boto3, LLM APIs), Bash/Shell

Databases: PostgreSQL, MySQL, Oracle, MongoDB, RDS, Athena, Snowflake, BigQuery

Security: HIPAA, SAST/DAST, PAM, AWS WAF, Security Hub, RBAC, IAM least-privilege

Tools & Platforms: JIRA, Confluence, Git, Bitbucket, GitHub, Nexus, JFrog Artifactory, Slack, Microsoft Teams
